

Massive EV adoption is coming here.

### Level 2

- Multi-Unit Residential Building, Public, Workplace, Destination
- Preferred option for home charging
- Installed charging station at 240 Volts
- 30-50 km of range per hour of charging

The Turnkey Solution.

### Hypercharge Cloud Platform & App

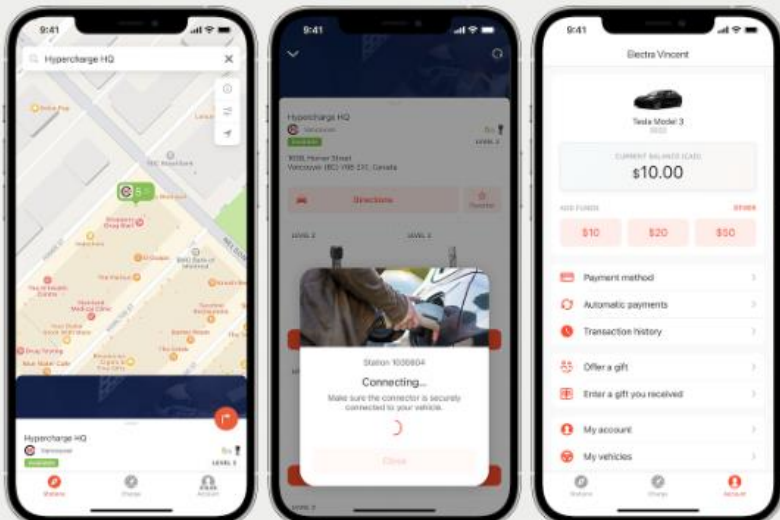

A comprehensive network that works for you.

### Dependable Charging Hardware

Reliable, easy-to-use, and convenient charging experiences.

### Proactive Support Services

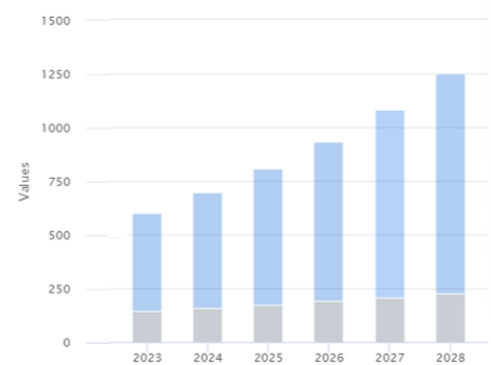

Support that's available to you 24 hours a day.

Get the Hypercharge app.

### Electric Vehicles Sales Projections

#### VEHICLE SALES

• Total • Battery Electric Vehicles

## Let's talk **Charging.**

### **Does it increase resale property value?**

- Yes! We are seeing increased property values of \$10,000-\$15,000 (Based on the 2023 Hypercharge Network Corp). Hyperchargers are likely to increase in value over time and may not be able to be added in after construction, or if it is possible, will be very difficult and costly to do so.

### **Can homeowners lock it?**

- Access to the chargers will be locked to homeowners. Ability to add RFID access card or simply use cellphone to operate.

### **How long does it take for a full charge?**

- Depending on the battery size , you will likely receive approx. 40km of range per hour.

### **How much is the electrical costs per full charge?**

- The Condo Corporation will set the rate. Comparable Hypercharge communities have been approximately \$1.50 per hour of charging, where as comparable public charging will cost \$2.50+

### **Can all electric vehicles use it (is it universal?)**

- Yes! All electric vehicles can use the charger, including Teslas.
